|---------------|--------------------------------------------------------|
| Name          | Shaheer Hussain                                        |
| Email address | shaheerhussain.datascience@gmail.com                   |
| Address       | London                                                 |
| Website       | "https://shaheerhussain.com" My data analyst portfolio |

## Personal Profile

Data analyst with 3.5 years experience in delivering high impact Power BI dashboards, SQL analysis, and Python based machine learning all within a UK Government/Regulatory environment. Experienced in cleansing and transforming complex datasets with both Python and Power BI to prepare for analysis, converting this data into actionable insights that support data driven decision making processes.

**My biggest achievement at MHRA was developing a classification model using Python to prioritise serious adverse drug reactions which enabled a faster identification and escalation of serious cases, Improving patient safety and delivering estimated operational savings of £5000 per month.**

## What can I bring to the table?

- **Regulatory grade analysis** – 4 years using SQL/Python on large, complex datasets in a UK regulatory setting.
- **Measurable impact** – Capability to build models that reduce manual effort, improve workflow efficiency and save on costs.
- **Clear communication** – Present my analysis clearly through written outputs and visualisations, articulating what the data shows and it's importance.
- **Stakeholder management** – Gather requirements and build consensus across cross-functional teams.
- **Data pipeline expertise** – Strong ETL, cleaning and validation to ensure high standard of data accuracy.
- **Innovative problem-solving** – Automating workflows using Python (Pandas, NumPy, Scikit-learn).
- **Accountability** – owns outcomes and drives pragmatic, action-focused solutions.

## Education

|                     |                                                                                                                                                                                                                                                                                              |
|---------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Sep 2020 - Jul 2022 | <b>Sixth Form</b><br>The City Academy - Hackney, London<br>BTEC Information technology : Distinction * (Equivalent to A*)<br>A-level Economics and A-level Geography at Grade B                                                                                                              |
| Oct 2022 - Dec 2024 | <b>Level 4 Data Analytics apprenticeship</b><br>Ada, National College for Digital Skills, London<br>Completion of a higher apprenticeship, covering Computer programming, Machine Learning and Data analysis concepts.                                                                       |
| Jan 2025 - Mar 2026 | <b>BSc (Hons) Digital and Technology Solutions (First class - Distinction)</b><br>Ada, National college for digital skills, London<br>1 year top-up to my data analysis apprenticeship with MHRA and Ada to build on previously covered subjects, Making it a level 6 degree apprenticeship. |

## Employment

|                     |                                                                                                                                                                                                                                                                                                                                                                  |
|---------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Oct 2022 - May 2026 | <b>Data Analyst</b><br>Medicines and Healthcare Regulatory Agency, London<br><b>Responsibilities included :</b> <ul style="list-style-type: none"><li>• Worked closely with stakeholders to gather business requirements, translating these requirements into technical solutions that support data driven decision making within sensitive timelines.</li></ul> |
|---------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

- Extracted, cleaned and transformed large datasets (Including large UK Health and PII datasets) using SQL and Python, ensuring high levels of data quality, consistency and accuracy before analysis.
- Designed, developed and maintained interactive Power BI and MicroStrategy dashboards that enabled stakeholders to monitor operational performance and make data driven decisions.
- Produced clear data visualisations to communicate complex information in a format accessible to both technical and non-technical stakeholders.
- Built and maintained reporting solutions to monitor laboratory equipment orders and maintenance schedules, aiding the department in improving planning and controlling costs (E.g. Identifying and stopping unnecessary subscriptions costing approximately £1390 a month).
- Presenting reports and dashboards to stakeholders to demonstrate its value by focussing on impacts and options. (E.g. Presenting dashboards to senior leadership and LRT to demonstrate cost savings of visualising lab equipment maintenance and orders.)
- Developed automation scripts to streamline repetitive data processing tasks to improve efficiency and workflow (Saving 10-15 minutes per task), reducing manual effort across the reporting workflows, Introducing these as new solutions across multiple departments.
- Applied Python Libraries including Pandas, NumPy and Scikit-learn to analyse datasets and support machine learning projects where appropriate.

## Skills

|                       |                                |
|-----------------------|--------------------------------|
| SQL                   | Data Validation                |
| Python                | Pandas                         |
| DAX                   | NumPy                          |
| Power BI              | Scikit-learn                   |
| MicroStrategy         | Classification Models          |
| Dashboard Development | Regression Models              |
| KPI Reporting         | Stakeholder Management         |
| ETL                   | Requirements Gathering         |
| Data Cleaning         | Agile Working                  |
| Data Transformation   | Cross-functional Collaboration |
| Data Modelling        |                                |
